

CURAPAX®

HYGIENIC, SAFE AND TIMESAVING

HEAT THERAPY USED TO BE TIME CONSUMING AND UNHYGIENIC

It is a well-established fact that heat therapy soothes muscles, eases IV insertion and warms patients after operations, among many other things. Unfortunately, patients often miss out on the benefits of heat therapy because it is too time consuming to prepare and administer. Not to mention unhygienic. And lack of storage space in each individual department also contributes to the problem.

CURAPAX MAKES IT SAFE AND EASY.

CURAPAX is a hygienic, disposable hot pack that is ready in two minutes. A soft, non-toxic gel is formed during warming. The pack is covered with textile that makes it safe and comfortable to use. And there's absolutely no time required for collection and cleaning after use – just dispose with regular household waste. Before use, CURAPAX is the same size and weight as an empty envelope so it's easy to store in every department. Now, hospital personnel have easy access to heat therapy for all their patients.

BENEFITS:

Integrated heat indicator. Heating indicator is an additional indicative precaution against harmful use

Eliminate the risk of cross contamination. It's the only gel filled disposable product for hot/cold therapy on the market.

Fast and safe preparation. The hot pack is ready in two minutes and is easy and safe to handle. No need for boiling water and the outer textile protects from burns. The gel is non-toxic.

Space saving solution. The hygienic 50-piece dispenser is the size of a shoe box and weighs only 1.2 kg. There's space for it in every department. Similar products weigh 300-500 grams each and take an accordingly large amount of storage space.

Flexible application. It's easy to create customized applications such as neck/shoulder packs by connecting multiple packs via their unique corner 'eyes'.

Disposable means no hidden costs. Personnel don't spend their valuable time retrieving, preparing, collecting, disinfecting and storing used packs. There is no expense for washing the wet towels or pillowcases often used for other heat therapy solutions. And patients don't risk unacceptable, expensive hospital infections from unclean, used heat packs.

Dispose as regular household waste. Contains PE, PA, PP and super absorbent polymer (SAP). PVC and latex free. CURAPAX® is a nontoxic, disposable product that can be disposed of with regular household waste.
